

## WinAC OPC-Client

The OPC Client provides a comfortable way to exchange data with other PLC or HMI systems out of the PLC program.

### Functionality

Typically access to the WinAC RTX data is possible using the SIMATIC NET OPC Server. Connecting to other OPC Servers is not supported by standard. This functionality is now implemented with the WinAC OPC Client that allows the WinAC to connect to different OPC Servers and exchange data.

### Examples of use

The WinAC OPC Client enables the WinAC to connect to other manufacturers PLC or HMI Systems, e.g.:

- TwinCat
- B&R
- etc.

### Scope of supply

Besides the WinAC extension and a detailed manual the package includes a Step7 demonstration program. It provides an insight into the usage of WinAC OPC Client and contains all necessary function and data block to be used in the user application.

### Reference system

Microbox PC427B  
Windows XP embedded SP2  
WinAC RTX-F 2009  
STEP7 V5.4 SP5
